An Introduction to Statistical Signal Processing

University of Maryland: An Introduction to Statistical Signal Processing Much of the basic content of this course and of the fundamentals of random processes can be viewed as the analysis of statistical signal processing sys-tems: typically one is given a probabilistic description for one random

object, which can be considered as an input signal

Statistical Signal Processing

Statistical signal processing algorithms work to extract the good despite the “efforts” of the bad This course covers the two basic approaches to statistical signal processing: estimation and detection In estimation, we want to determine a signal’s waveform or some signal aspect(s) Typically the parameter or signal we want is buried in
